

# ecosat<sup>®</sup>

EcoSAT is a flexible product on which you can monitor, or control anything. EcoSAT includes a very powerful set of sensor connections that allow it to be used as a simple tank monitoring system, or when the time comes it can easily be adapted to something new, such as an automatic water pump control system. Remote and wireless water tank level monitoring is just one simple application where EcoSAT could be used. However, the possibilities are endless, limited only by your imagination. Simply remove one sensor, and install another to use your EcoSAT for tank water levels monitoring today, and cattle counting tomorrow. Contact Irrismart today to discuss your needs.

Satellite, Mobile Data, UHF! No matter where you are located, from urban and rural Victoria, to central Australia, we have a cost effective solution for everyone. The EcoSAT product is made to include whatever communications you need to keep you in touch with your property.
