

## Pump / Flow Monitor

Monitor and control your pump with the Fieldwise Pump/Flow Monitor. The Pump/Flow Monitor works with combustion engines and electric pumps. It is also compatible with various flow meters to give you access to the flow data remotely on the Fieldwise Portal.

The Pump/Flow Monitor can also be custom configured for the commands to be sent to any other device on the account. So, in the instance of a pivot shutting down, a stop command will automatically be sent to the pump, preventing watering in one spot.

## FEATURES

### CONTROL

- Start
- Stop

### MONITOR

- Run
- Pressure
- Flow

The smarter way to control every drop!
