

T-L Basic Controller

Monitor and control your T-L with the new and improved T-L Basic Controller. The T-L Basic Controller can be wired for use on electric panels or combustion engines, and can be used with T-L manual Control, Point Control or Precision Point Control systems.

When the Basic Controller is paired with a solar powered Z5-Remote panel, you can have positioning and pressure readings at the end of the system plus, the wireless design allows the Basic Controller to be located at the Pivot Point or remote site without the need to span cable or underground wire to communicate to the panel from the end tower.

The Z5-Remote also allows you to wire in a pressure transducer or pressure switch to monitor your pressure at the end pivot.

The smarter way to control every drop!

FEATURES

CONTROL

- Start
- Stop
- Endgun
- Auxiliary

MONITOR

- Direction
- Run
- Speed
- Pressure
- GPS Position
- GPS Stall
- Intelligent Collision Detection
